YASH NAIYA

Software Developer | M.Tech Data Analytics, NIT Tiruchirappalli
yashnaiya16@gmail.com | +91-9081819007 | linkedin.com/in/yashnaiya | github.com/yashNaiya
Tiruchirappalli, Tamil Nadu (Open to relocation)

EDUCATION

M.Tech in Data Analytics, National Institute of Technology, Tiruchirappalli **2025 – Expected 2027**
CGPA: 7.90 / 10 (up to 2nd semester) | Admitted through GATE

B.Tech in Computer Engineering, Birla Vishwakarma Mahavidyalaya, Anand **2019 – 2023**
CGPA: 7.81 / 10

Class XII (GSEB), Shree Swaminarayan Gurukul, Bhavnagar **2019**
Percentage: 71.53%

Class X (GSEB), Shree Swaminarayan Gurukul, Bhavnagar **2017**
Percentage: 91.33%

EXPERIENCE

Software Developer Intern, BISAG-N, Govt. of India, Gandhinagar **Jan 2023 – May 2023**

- Built a project management tool for software teams on the MERN stack, delivering 10 React UI screens backed by Node.js and MongoDB.
- Designed REST APIs for client-server communication and structured the app into employee, manager and admin modules with role-based access control, following MVC architecture for maintainability.
- Implemented a real-time task chat for team collaboration and a team management panel for task assignment and progress tracking across the organization.
- Delivered across 8 agile sprints with daily standups and iterative releases, reducing last-minute fixes; debugged issues found during integration testing.

Software Developer Intern, TatvaSoft **May 2022 – Jun 2022**

- Built Book-E-Sell, an online book marketplace, from scratch with a React front end and a .NET (C#) back end.
- Wrote unit tests throughout development, fixed bugs found in testing, and incorporated feedback from team code reviews.

PROJECTS

Social Networking Platform | *MongoDB, Express.js, React, Node.js, Redux, Cloudinary* **Mar 2026 – Apr 2026**

- Built a community discussion-board platform where users create posts, comment and vote within forums.
- Implemented Hot, Top and Controversial post ranking, pagination, full-text search and Redux state management to improve content discovery and scalability.
- Designed MongoDB schemas with Mongoose, integrated Cloudinary for image uploads, and debugged and optimized front-end and back-end modules.

Codebase RAG & Software Engineering Assistant | *Python, LLMs, RAG, Embeddings, Vector Search* **Mar 2026 – Apr 2026**

- Developed an AI assistant that answers software engineering questions from a repository's source code using Retrieval-Augmented Generation.
- Implemented code parsing, chunking, embeddings and vector similarity search to retrieve relevant snippets as context for an LLM.
- Built a question-answering interface that helps developers understand code structure and locate relevant implementations.

Lightweight LLM-Driven SQL Query Generation | *Python, PyTorch, Hugging Face, PEFT (LoRA), DuckDB* **May 2026 – Jun 2026**

- Developed a lightweight Text-to-SQL system by fine-tuning Llama-3.2-3B-Instruct with parameter-efficient LoRA.
- Fine-tuned sequentially on the Spider benchmark for general SQL reasoning, then on an Olist e-commerce dataset for domain-specific schema adaptation using teacher-generated NL-SQL pairs.
- Evaluated execution accuracy, SQL syntax validity, BLEU, ROUGE-L and inference latency in an isolated DuckDB environment.

TECHNICAL SKILLS

- **Languages:** C, C++, C#, JavaScript, Python, SQL
- **Web Development:** React, Redux, Node.js, Express.js, .NET, REST APIs, Mongoose, MVC
- **Databases:** MongoDB, MongoDB Atlas, DuckDB
- **AI / ML:** PyTorch, Hugging Face Transformers, PEFT (LoRA), Retrieval-Augmented Generation (RAG), Embeddings, Vector Search
- **Tools:** Git, GitHub, Docker, Postman, Jupyter Notebook, Visual Studio Code
- **Core CS:** DBMS, Operating Systems, Computer Networks, Object-Oriented Design, Agile / Scrum
